# SONY®

<b>General System</b>	PLL quartz-locked digital synthesizer system
<b>Power requirements</b>	FM stereo, FM/AM super-heterodyne tuner AEP model: 220 V ac (or 240 V ac adjustable by authorized Sony personnel), 50/60 Hz UK model: 240 V ac (or 220 V ac adjustable by authorized Sony personnel), 50/60 Hz
<b>Power consumption</b>	8 watts
<b>Dimensions</b>	Approx. 430 x 55 x 270 mm (w/h/d) (17 <sup>1</sup> / <sub>8</sub> x 2 <sup>1</sup> / <sub>4</sub> x 10 <sup>3</sup> / <sub>4</sub> inches) including projecting parts and controls
<b>Weight</b>	2.9 kg (6 lbs 6 oz)

**FEATURES**

**The quartz-locked digital frequency-synthesizer system** allows accurate and stable tuning that is not affected by temperature variations or long period usage.

**Quick and accurate station selection** is possible with an electronic digital readout on the frequency display window.

Two methods of tuning are available:  
**Manual tuning**, in which each band can be scanned either rapidly or step-by-step.

**Memory preset tuning**, in which the frequency of up to 15 stations can be stored in the memory. In this mode, you can tune in your favorite station by pushing its station button.

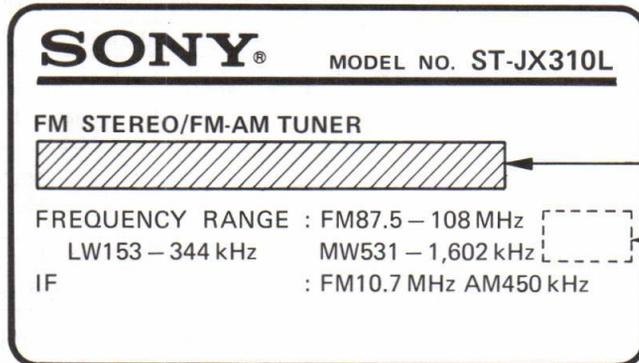

**An FM muting circuit** is incorporated to eliminate any interstation noise.

**The memory contents are retained** by a lithium manganese battery incorporated in the tuner when the power is turned off. This battery also allows the last station tuned in to be held in the memory.

● THE CERAMIC CAPACITORS

This set uses tube-type ceramic capacitors whose shape is identical with the carbon resistors. Be careful not to use resistors instead of capacitors in repairing.

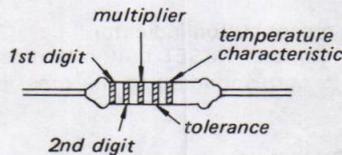

Disc-type ceramic capacitors can be used for replacing those originally used in the set.

Two kinds of drilled holes are provided in some patterns for mounting the tube-type and disc-type ceramic capacitors. Use appropriate holes where applicable.

● IF OFFSET ADJUSTMENT:

Circuit Connections Depending on the Ceramic Filter (CF201-203)

This set employs three types of ceramic filter (CF201-203) which have different center frequency. Therefore FM IF offset adjustment by diode connection is necessary to match the center frequency of the ceramic filter used with FM intermediate frequency.

Ceramic filter Color mark	Center frequency (MHz)	Diode connection		FM intermediate frequency (MHz)

## LOCATION AND FUNCTION OF CONTROLS

**1 POWER switch**

Depress to turn on the power. To turn the power off, press the switch again.

**2 TUNING button**

Press either side of this button to change the frequency. Press the left side ( - ) to go to a lower frequency and the right side ( + ) to go to a higher. To change the frequency continuously until the desired frequency is received, keep the button pressed. The frequency figures will change rapidly. To change the frequency slowly, successively press and immediately release the button.

**3 MEMORY switch**

Press to operate memory circuit. The MEMORY indicator will appear in the band/frequency-display window for a few seconds indicating that the memory circuit is standing by.

**4 STEREO/MUTING switch**

This switch serves the dual purpose of a mode and FM muting switch. Normally keep this switch engaged (the MUTING indicator illuminates) to eliminate FM interstation noise while tuning from station to station. The tuner operates in stereo mode for stereo sound sources and will be automatically switched to mono mode for monaural sound sources.

**5 BAND selector**

Selects the desired band: The selected band will be indicated in the band/frequency-display window.

**6 STEREO indicator**

This indicator will light when an FM stereo program of sufficient signal strength is tuned in with the STEREO/MUTING switch engaged.

**7 Station PRESET buttons**

To call up a memorized station, press the appropriate button.

**8 LAYOUT FREE AM external ferrite-bar antenna**

For AM (MW/LW) reception, always connect this antenna to the AM ANTENNA terminal on the rear panel. Position the LAYOUT-FREE AM antenna for best reception.

**Band/frequency display window****9 Band/frequency-display**

Permits reading the received frequency at a glance from the figures.

**10 Station preset button indicator**

When the station PRESET button is pressed, a figure from 1 to 5 corresponding to the pressed button will appear.

**11 MEMORY indicator**

When the MEMORY switch is pressed, "MEMORY" will appear for a few seconds indicating that the memory circuit is standing by.

**12 TUNED indicator**

This indicator illuminates when a sufficiently strong signal is tuned in.

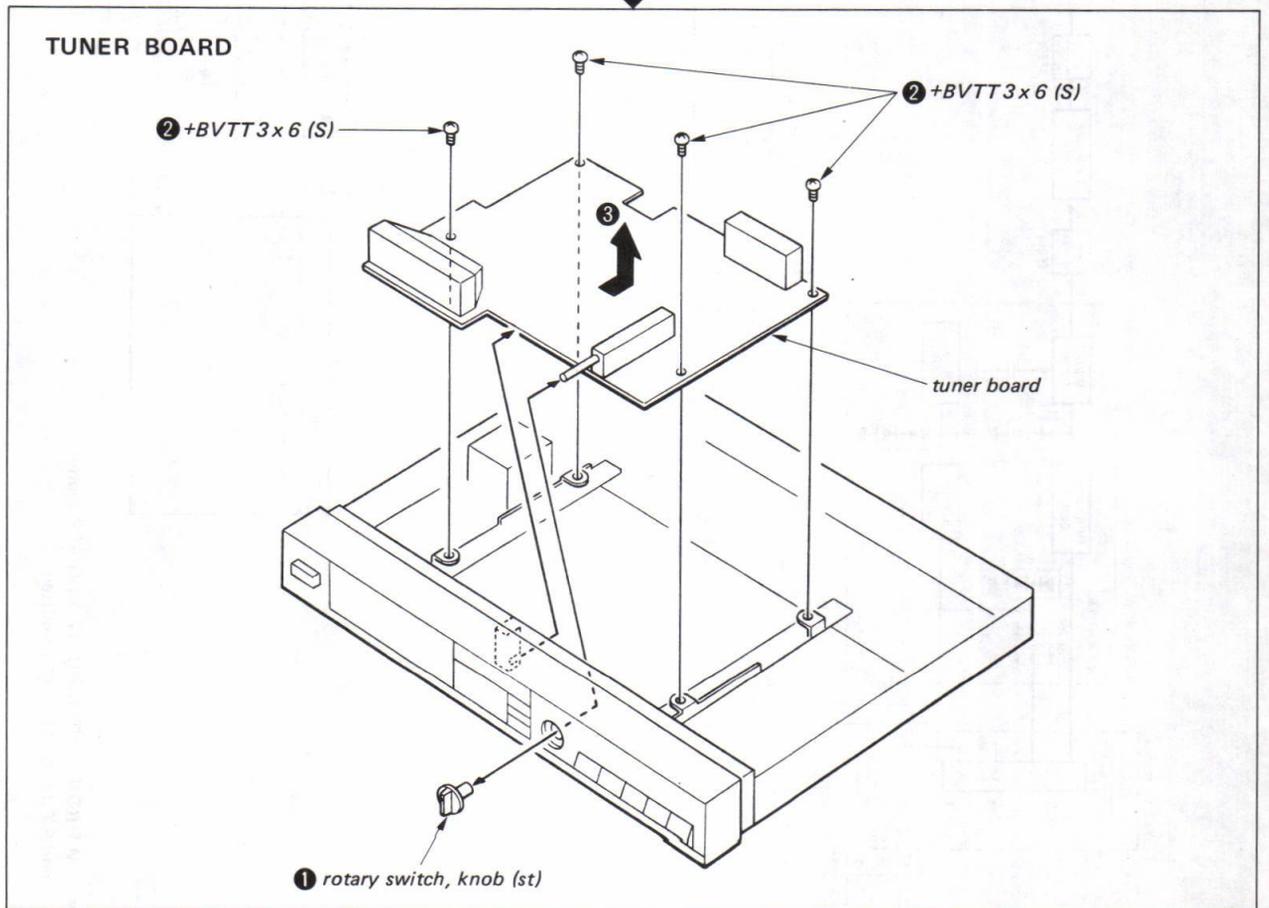

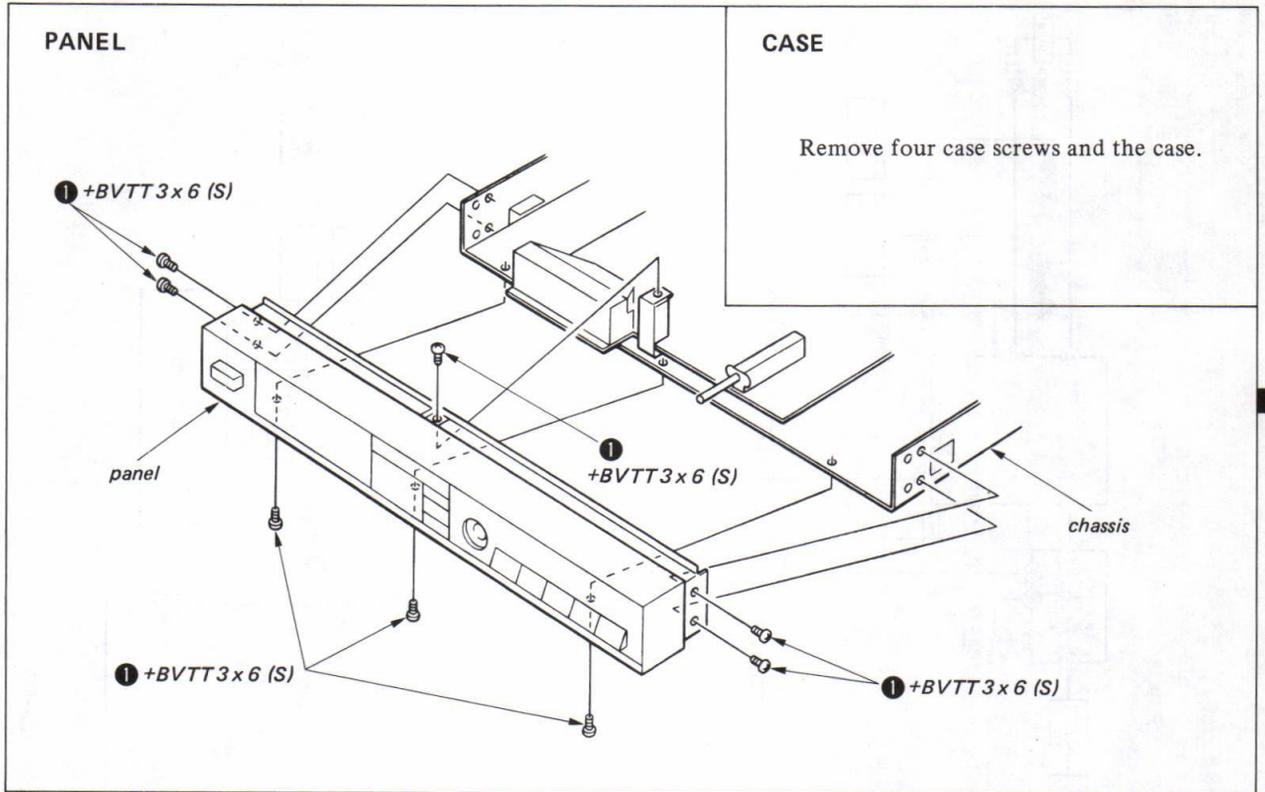

**13 MUTING indicator**

This indicator illuminates when the STEREO/MUTING switch is engaged in FM reception.

- Items marked "●" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- Due to standardization, parts with part numbers (Δ-ΔΔΔ-ΔΔΔ-XX or Δ-ΔΔΔΔ-ΔΔΔ-X) may be different from those used in the set.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

## CAPACITORS:

- All capacitors are in  $\mu\text{F}$ . Common capacitors are omitted. Refer to the following lists for their part numbers.  
MF:  $\mu\text{F}$ , PF:  $\mu\text{pF}$ .

## COILS

- MMH : mH, UH :  $\mu\text{H}$

## SEMICONDUCTORS

- In each case, U :  $\mu$ , for example:  
UA...:  $\mu\text{A}$ ..., UPA...:  $\mu\text{PA}$ ..., UPC...:  $\mu\text{PC}$ ,  
UPD...:  $\mu\text{PD}$ ...

The components identified by shading and mark  $\Delta$  are critical for safety. Replace only with part number specified.
